

Finance Tracker Application Project Documentation

Developed by: Soham Roy

Course: Applied Programming Projects 2025

Overview

The Finance Tracker Application is a secure, user-friendly, and intuitive tool designed to help users efficiently track their income and expenses. This project integrates multiple stacks with a primary focus on Django, and it offers iterative development opportunities to learn and implement and practise some basic full-stack practices.

Objectives

- **Secure Financial Management:** Build an application that allows users to safely manage and track their income and expenditures.
- **Multi-stack Development:** Learn and apply full-stack development techniques using Django (MVT) and optionally integrate Flask for microservices or API endpoints.
- **Data Visualization:** Provide dynamic dashboard visualizations to help users gain insights into their financial trends.
- **Robust CRUD Operations:** Implement comprehensive create, read, update, and delete functionalities for financial records.
- **Data Export:** Allow users to export financial data in formats such as CSV and PDF for further analysis.

Project Structure & Development Phases

Project Structure

- **Frontend:**
 - **Technologies:** HTML, CSS, JavaScript, Bootstrap
 - **Tools:** Django Templates, JavaScript Libraries (Chart.js for visualizations)
- **Backend:**
 - **Primary Framework:** Django (using the Model-View-Template pattern)
 - **Optional Integration:** Flask (for dedicated API endpoints or microservices if needed)
 - **Language:** Python
- **Database:**
 - **System:** PostgreSQL
 - **Usage:** Managing user data and financial transactions

Development Phases

Phase 1: Environment & Project Setup

- **Tasks:**
 - Initialize the project repository with version control.
 - Set up a virtual environment and manage dependencies (using a `requirements.txt` file).
 - Configure the Django project and connect to a PostgreSQL database.
 - Establish the initial project structure (folders, settings, etc.).

Phase 2: User Authentication & Core Modules

- **Tasks:**
 - Implement secure user registration, login, logout, and password management using Django's authentication system.
 - Define the core models (User, Transaction, and optionally Category or Budget models).
 - Develop initial views and templates to support basic user interactions.

Phase 3: CRUD Operations & Data Management

- **Tasks:**
 - Develop functionalities to create, read, update, and delete financial transactions.
 - Integrate form validation and manage database interactions securely.
 - Ensure smooth data management with Django's built-in tools.

Phase 4: Dashboard Visualization

- **Tasks:**
 - Integrate JavaScript libraries (e.g., Chart.js) to create interactive data visualizations.
 - Develop a dynamic dashboard view that summarizes income, expenses, and trends.
 - Enhance the user experience with responsive design elements.

Phase 5: Data Export Functionality

- **Tasks:**
 - Develop features that allow users to export their financial data in CSV and PDF formats.
 - Ensure the export functionality respects data security and privacy considerations.

Phase 6: Optional API / Flask Integration

- **Tasks:**
 - Evaluate requirements for a microservice-based approach.
 - Optionally, implement RESTful API endpoints using Flask for dedicated functionalities.
 - Consider integrating with Django REST Framework as an alternative to maintain a single backend.

Phase 7: Testing, Security, & Deployment

- **Tasks:**
 - Write and run comprehensive unit, integration, and end-to-end tests.
 - Perform security audits and optimizations.
 - Prepare for deployment, including containerization (using Docker), CI/CD

integration, and hosting strategies.

Contributing & Future Enhancements

- **Contributing:**
 - Contributions are welcome! Follow the repository guidelines to create feature branches and submit pull requests.
- **Future Enhancements:**
 - Advanced reporting modules
 - Multi-currency support
 - Additional microservice/API integrations
 - Enhanced UI/UX based on user feedback

This document provides the roadmap and detailed plan for the Finance Tracker Application. I expect adjustments and iterations as the project evolves along the way.
